

Secret Monero Bridge Command Line Interface (CLI)

version 1.0-beta2

November 14, 2021

The Secret Monero Bridge CLI enables users to make deposits and withdrawals over the Secret Monero Bridge without having to use a web application and the Keplr browser extension wallet.

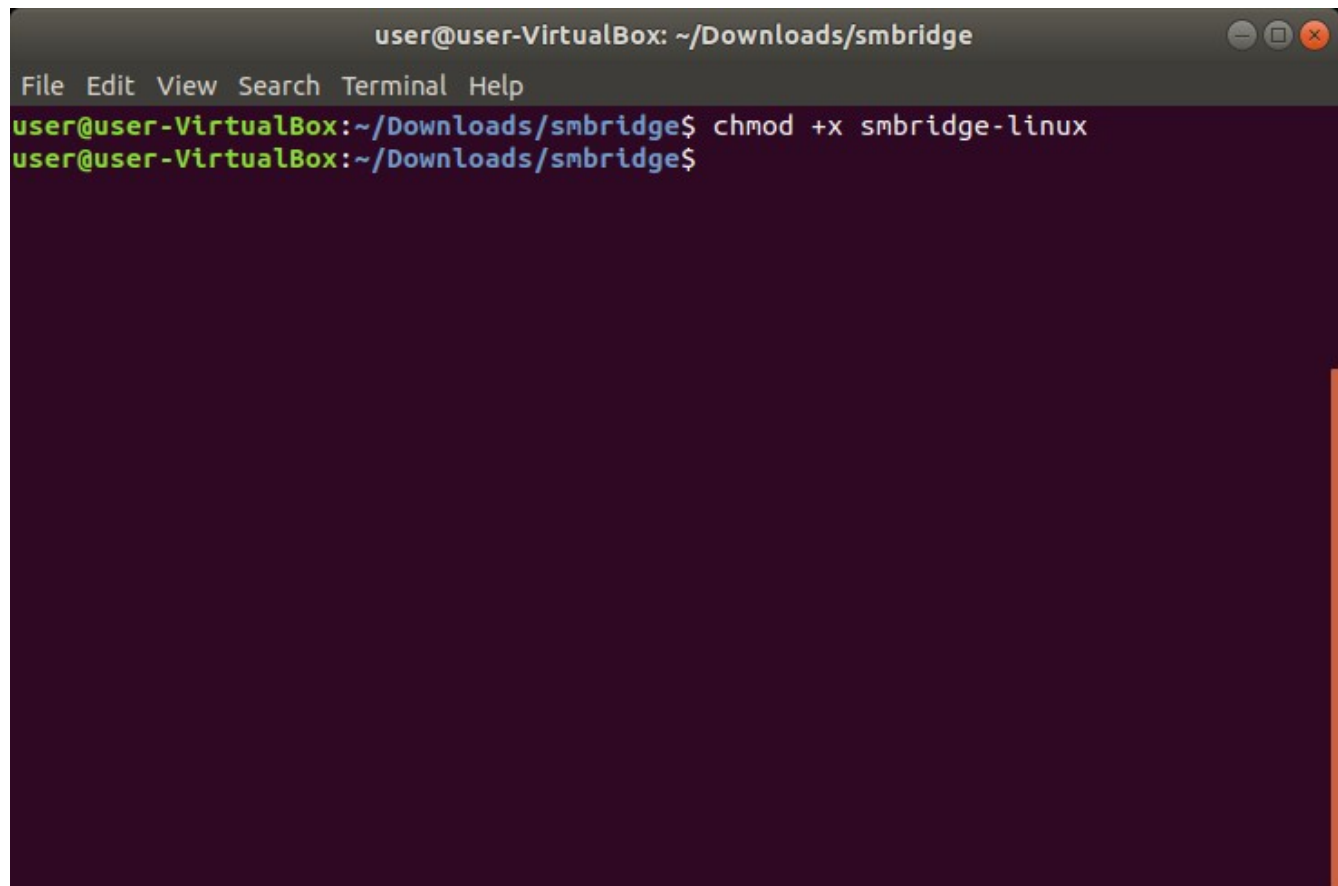

The only dependencies are:

- access to the Secret Network via an operational *secretcli* (> version 1.2.0) instance
- The ability to send an email message (preferably anonymously)

The Secret Monero Bridge CLI can be found at: <https://github.com/maxkoda-cpu/Secret-Monero-Bridge-CLI>

The source code and binaries for popular platforms (Linux, Mac, and Windows) can be found at the github repository.

Examples shown in this document are for the Linux platform. The Linux binary needs to be executable (`chmod +x smbridge-linux`).

```
user@user-VirtualBox: ~/Downloads/smbridge
File Edit View Search Terminal Help
user@user-VirtualBox:~/Downloads/smbridge$ chmod +x smbridge-linux
user@user-VirtualBox:~/Downloads/smbridge$
```

Help

You can get help by typing: `./smbridge-linux -h`

```
user@user-VirtualBox: ~/Downloads/smbridge
File Edit View Search Terminal Help
user@user-VirtualBox:~/Downloads/smbridge$ ./smbridge-linux -h
Usage: smbridge-linux <command> [options]

Commands:
  smbridge-linux d  Enter a Deposit
  smbridge-linux w  Enter a Withdrawal
  smbridge-linux f  Lookup current fee

Options:
  -h, --help      Show help                  [boolean]
  -v, --version   Show version number        [boolean]
user@user-VirtualBox:~/Downloads/smbridge$
```

Bridge Fee:

You can view the current bridge fee by typing: `./smbridge-linux f`

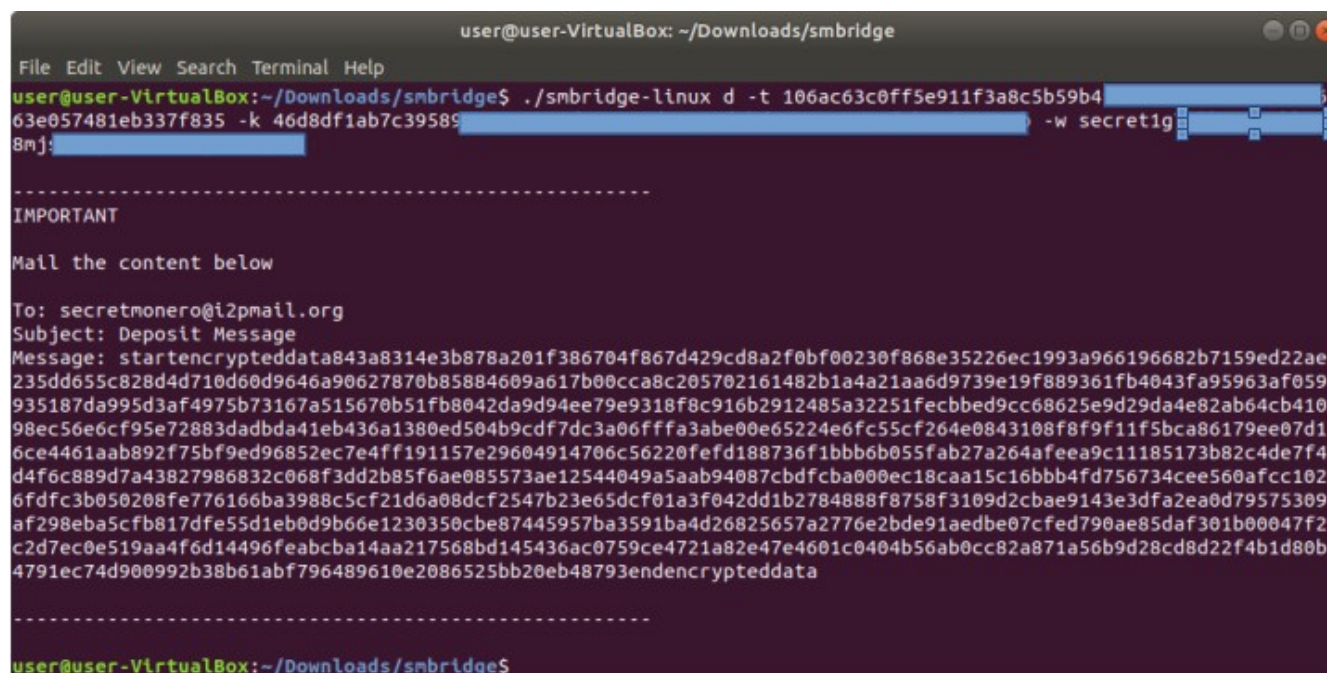

```
user@user-VirtualBox: ~/Downloads/smbridge
File Edit View Search Terminal Help
user@user-VirtualBox:~/Downloads/smbridge$ ./smbridge-linux f
0.01
user@user-VirtualBox:~/Downloads/smbridge$
```

Deposit:

You can make a deposit by typing: `./smbridge-linux d -t <txid> -k <txkey> -w <secret_wallet_address>`

The deposit payment must be sent over the Monero network prior to issuing the deposit command with the Secret Monero Bridge CLI. The Secret Monero Bridge CLI deposit command does not make a Monero deposit payment. It simply provides a proof-of-payment for a prior deposit payment.

Some values presented below have been redacted to preserve privacy. Portions of the Monero txid, txkey, and the secret wallet address have been redacted.

```
user@user-VirtualBox: ~/Downloads/smbriidge
File Edit View Search Terminal Help
user@user-VirtualBox:~/Downloads/smbriidge$ ./smbridge-linux d -t 106ac63c0ff5e911f3a8c5b59b4[redacted]
63e057481eb337f835 -k 46d8df1ab7c39589[redacted] -w secret1g[redacted]
8mj:[redacted]

Email information is provided to enable transferring proof-of-payment information. The email proof-of-payment information is provided in an RSA encrypted string (*text between the startencrypteddata.....endencrypteddata markers*).

The *Message* text should be included in the body of the email.

The email message should be sent to the email address specified in the *To:* reference.

The *Subject* is optional.

Once the email is received, an automated process verifies the proof of payment and sXMR is minted (amount of XMR transferred minus bridge fee) and deposited to the secret_wallet_address specified in the command.

The mailbox receiving these proof-of-payment email messages is on the I2P network. To maintain anonymity, it is recommended that the sender use an anonymous email service to avoid leaving metadata traces.

Withdraw:

You can make a withdrawal by typing: `./smbbridge-linux w -w <secret_wallet_address> -a <amount> -m <monero_wallet_address>`

The withdraw command uses the local *secretcli* to transfer the specified amount of sXMR to the Secret Monero Bridge multi-signature account

Some values presented below have been redacted to preserve privacy. Portions of the Monero wallet address and the secret wallet address have been redacted.

```
user@user-:~/ :/ /cli/test$ ./smbbridge-linux w -w secretcli
-a 0.110 -n 4Kc
Confirm amount: 0.11 = 110000000000 atomic units, current Fee is 0.01 (Y/n) Y

user@user-:~/ :/ /cli/test$
```

The command will request verification of the amount of the withdrawal (shown in decimal and atomic units).

The command will echo the txhash (from the Secret Network) of the sXMR transfer transaction. This txhash is presented for informational purposes.

Email information is provided to enable transferring proof-of-payment information. The email proof-of-payment information is provided in an RSA encrypted string (*text between the startencrypteddata.....endencrypteddata markers*).

The *Message* text should be included in the body of the email.

The email message should be sent to the email address specified in the *To:* reference.

The *Subject* is optional.

Once the email is received, an automated process verifies the proof of payment and the sXMR is burned and the corresponding amount (amount specified minus bridge fee) of XMR is transferred to the Monero address specified in the command.

The mailbox receiving these proof-of-payment email messages is on the I2P network. To maintain anonymity, it is recommended that the sender use an anonymous email service to avoid leaving metadata traces.
